

# CAPSTONE PROJECT

SHOP\_FOR\_HOME

MENTOR : NEERAJ KUMAR KHERIA

BATCH -10

1. Umasasank Karpurapu
2. Ganesh Grandhi
3. Priya Chandana
4. Puli Jhansi
5. Kalathuru Rasi

# INTRODUCTION

- The meaning of online shopping is the process of buying goods and services from merchants over the Internet.
- Online Shopping makes easier for customers to choose different variety of product which they want, that the reason online shopping popularly used nowadays

# PROBLEM STATEMENT

Shop For Home is a popular Store in the market for shopping the home décor Stuff. Due to Covid 19 all the offline shopping stopped. So, the store wants to move to the cloud platforms and wants their own web application.

There are 2 users on the applications:

- User
- Admin

# USER SPECIFICATIONS

# USER STORIES :

- As a user I should be able to login, Logout and Register into the application.
- As a user I should be able to see the products in different categories.
- As a user I should be able to sort the products.
- As a user I should be able to add the products into the shopping cart.
- As a user I should be able to increase or decrease the quantity added in the cart.
- As a user I should be able to add “n” number of products in the cart.
- As a user I should be able to get the Wishlist option where I can add those products which I want but don't want to order now.
- As a user I should get different discount coupons.

# ADMIN SPECIFICATIONS

## Online shopping

# ADMIN STORIES :

- As an Admin I should be able to login, Logout and Register into the application.
- As an Admin I should be able to perform CRUD on Users.
- As an Admin I should be able to Perform CRUD on the products.
- As an Admin I should be able to get bulk upload option to upload a csv for products details
- As an Admin I should be able to get the stocks.
- As an Admin I should be able to mail if any stock is less than 10.
- As an Admin I should be able to get the sales report of a specific duration.
- As an Admin I should be able to set the discount coupons for the specific set of users

# INSTRUCTIONS

- Please use a folder on server to upload the images
- Please share the database structure in the .sql file
- Please create a separate micro service for reports and discount coupons.
- Please use separate port to deploy the Angular UI and Spring Boot Microservice
- Please use the UI designing tool like(Bootstrap or Material) to make your UI better
- Please use Material UI to create the UI.
- Application should be deployed on EC2 instances in an autoscaling group behind an application load balancer. A user-data script can be used to install the application on the instances by fetching it from S3 buckets

# TECHNOLOGIES USED :

- ☐ HTML and CSS : Page has been designed using HTML and CSS in Visual Studio Code
- ☐ Java Script : All the validation task and animations has been developed by Java Script
- ☐ Spring Boot : All the business and backend API logic has been implemented in Java Script
- ☐ POSTGRESQL : POSTGRESQL Database has been used as database for the project
- ☐ Angular : All the Frontend logic has been implemented over Angular and we used angular CLI for it
- ☐ Visual Studio Code : For Angular IDE, we have used Visual Studio Code.

# SPRINT 1 OBJECTIVES :

- Create git repository
- Create database schema (all tables along with their relationships)
- Create entities in spring
- Create Microservices based structure
- CRUD on User and Products
- Create an eCommerce Template in angular (Static only) to hold images and products lists.
- Develop Search Functionality in Angular
- Bulk upload implementation

## SPRINT 2 OBJECTIVES :

- Cart Option
- Stock and Sales reports
- Create Data Transfer objects
- Create repository
- Create Service layer logic
- Create Controller to direct rest api
- Create Discount Microservice

# CREATING GIT REPOSITORY :

The screenshot shows a GitHub repository page for 'umamasank / batch10\_Capstone-project'. The repository is public and has 1 branch (master) and 0 tags. The commit history shows a single commit by 'umamasank' 20 hours ago. The file list includes 'backend', 'frontend', '.gitignore', 'README.md', 'db\_schema.png', 'docker-compose.yml', 'eshop.sql', and 'fileupload.csv'. The README.md file is selected, showing the title 'Online Shop Application' and a description: 'A full-stack Online Shop web application using Spring Boot 2 and Angular 7. This is a Single Page Application with client-side rendering. It includes backend and frontend two separate projects on different branches. The frontend client makes API calls to the backend server when it is running.' The features listed are REST API and Docker.

README.md

## Online Shop Application

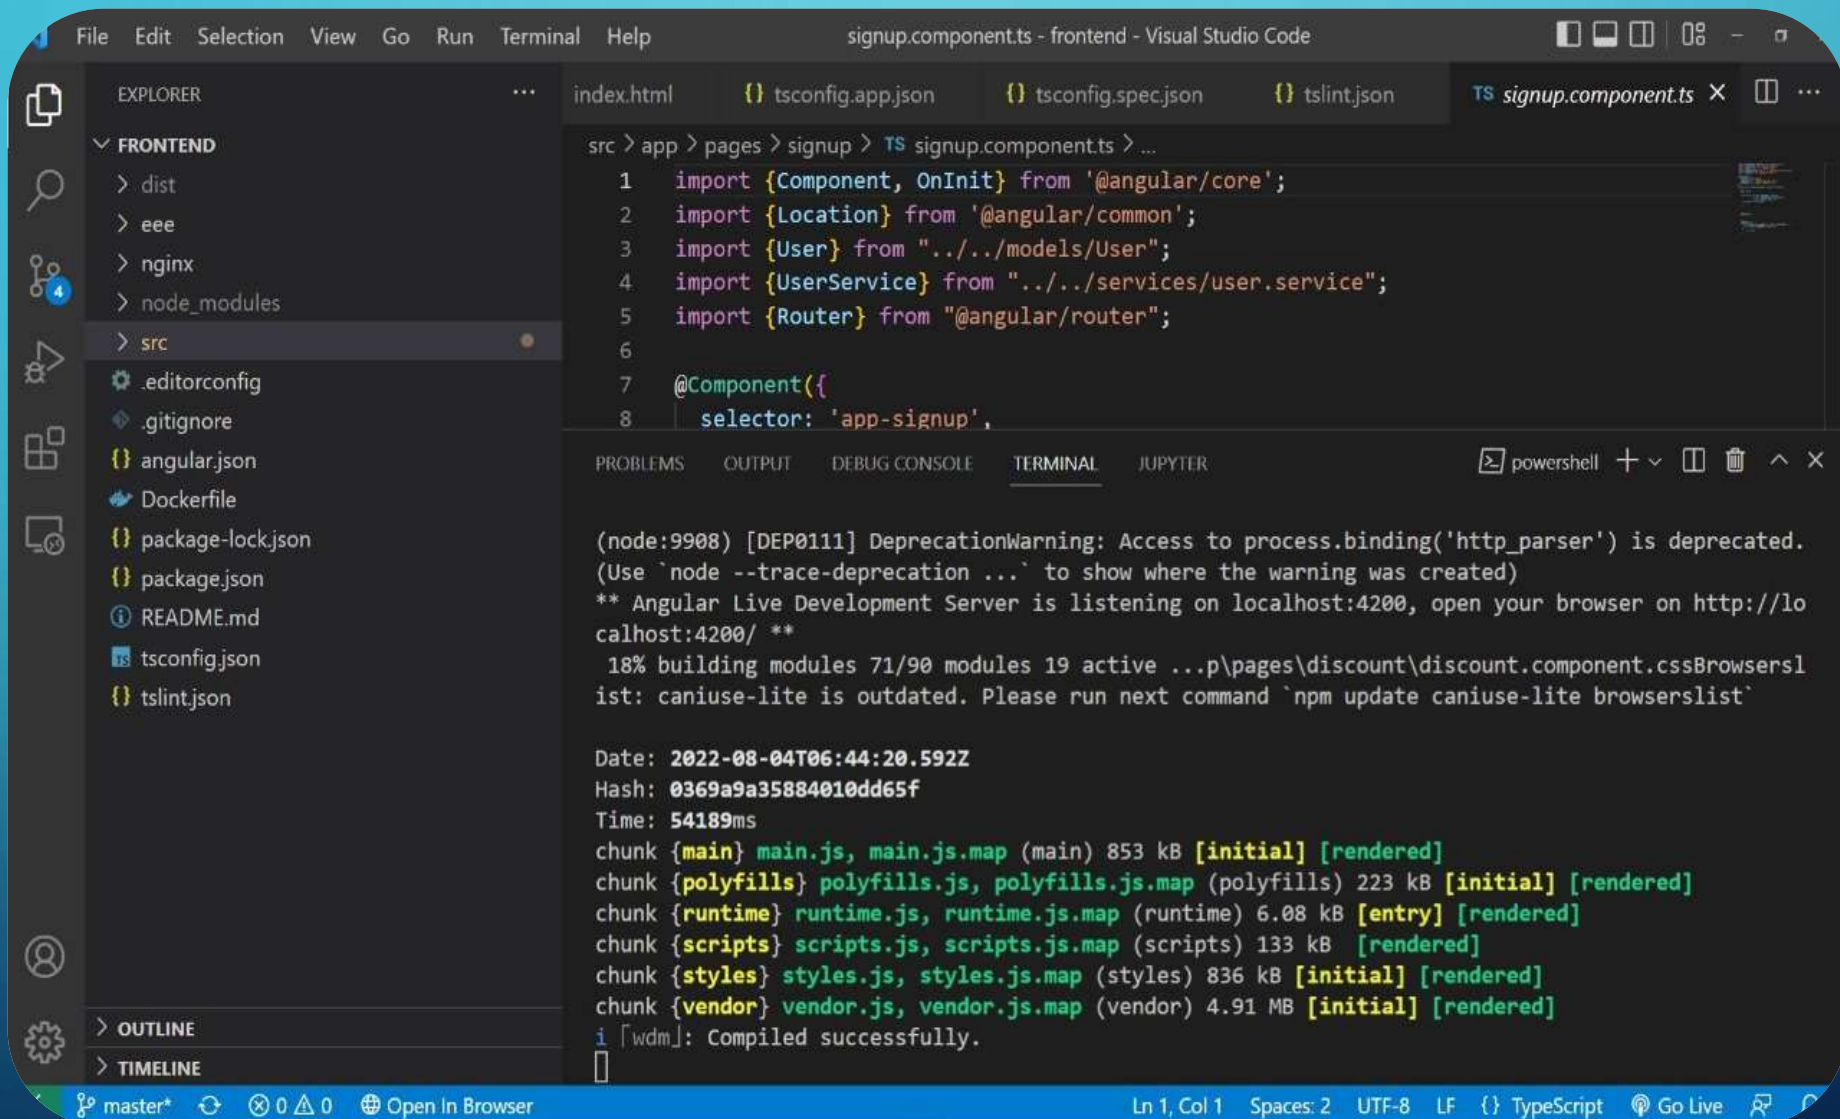

A full-stack Online Shop web application using Spring Boot 2 and Angular 7.

This is a Single Page Application with client-side rendering. It includes backend and frontend two separate projects on different branches. The frontend client makes API calls to the backend server when it is running.

### Features

- REST API
- Docker

# ANGULAR UI - FOR FRONTEND

The screenshot displays the Visual Studio Code interface for an Angular project. The Explorer panel on the left shows the project structure, with the `src` directory expanded. The main editor shows the `signup.component.ts` file, which contains the following TypeScript code:

```
1 import {Component, OnInit} from '@angular/core';
2 import {Location} from '@angular/common';
3 import {User} from "../../models/User";
4 import {UserService} from "../../services/user.service";
5 import {Router} from "@angular/router";
6
7 @Component({
8   selector: 'app-signup',
```

The bottom panel shows the Terminal window with the following output:

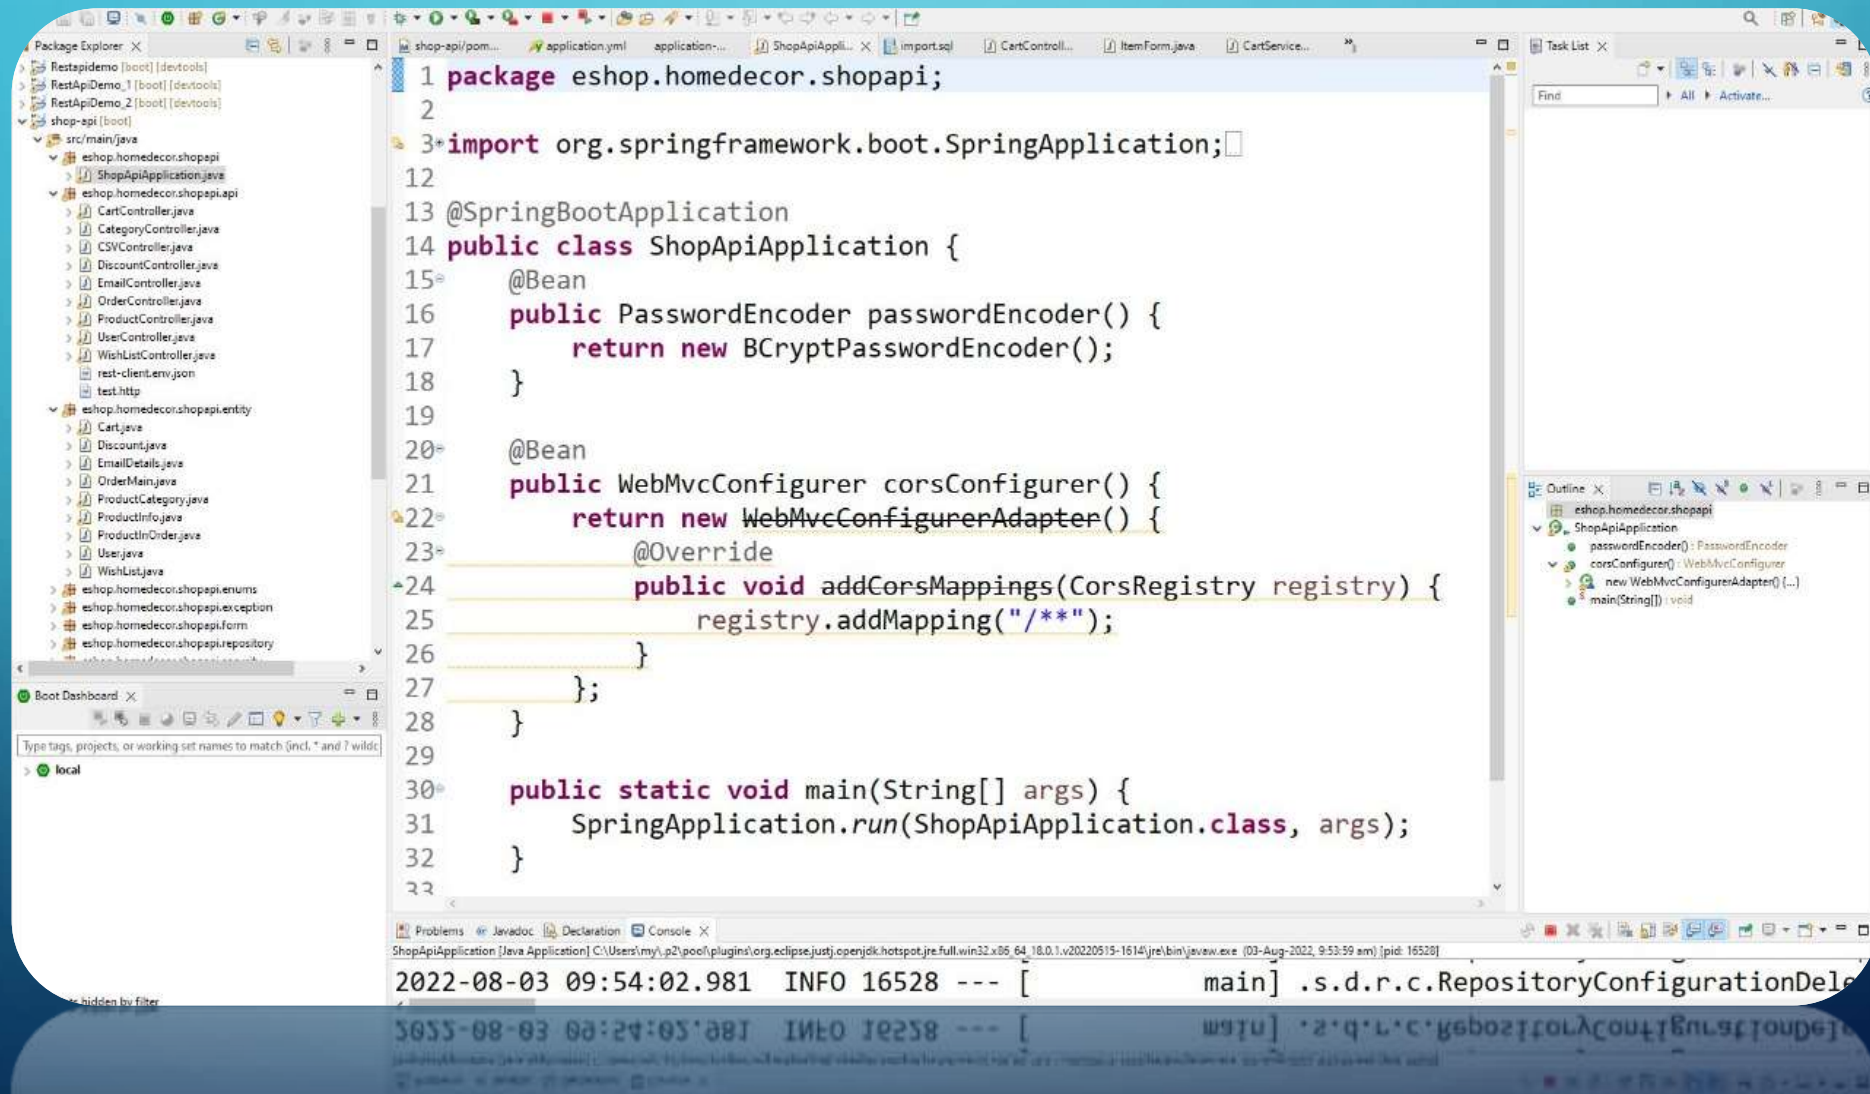

```
(node:9908) [DEP0111] DeprecationWarning: Access to process.binding('http_parser') is deprecated.
(Use `node --trace-deprecation ...` to show where the warning was created)
** Angular Live Development Server is listening on localhost:4200, open your browser on http://localhost:4200/ **
18% building modules 71/90 modules 19 active ...p\pages\discount\discount.component.cssBrowserslist: caniuse-lite is outdated. Please run next command `npm update caniuse-lite browserslist`

Date: 2022-08-04T06:44:20.592Z

```

The status bar at the bottom indicates the current file is `Ln 1, Col 1` in `Spaces: 2` using `UTF-8` encoding and `LF` line endings. The file is a `TypeScript` file.

# CREATING CONTROLLER TO DIRECT REST API USING SPRING BOOT – FOR BACKEND

```
1 package eshop.homedecor.shopapi;
2
3 import org.springframework.boot.SpringApplication;
12
13 @SpringBootApplication
14 public class ShopApiApplication {
15     @Bean
16     public PasswordEncoder passwordEncoder() {
17         return new BCryptPasswordEncoder();
18     }
19
20     @Bean
21     public WebMvcConfigurer corsConfigurer() {
22         return new WebMvcConfigurerAdapter() {
23             @Override
24             public void addCorsMappings(CorsRegistry registry) {
25                 registry.addMapping("/*");
26             }
27         };
28     }
29
30     public static void main(String[] args) {
31         SpringApplication.run(ShopApiApplication.class, args);
32     }
33 }
```

# AWS CONSOLE – EC2 INSTANCE

The screenshot displays the AWS Management Console interface for the EC2 service. The top navigation bar includes the AWS logo, a search bar, and the user's name 'Ganeshw'. The left sidebar shows the 'Instances' section selected, with a list of instance types and launch templates. The main content area shows a table of instances with one instance, 'CapstoneProject', in a 'Running' state. Below the table, the 'Details' tab for the instance 'i-0e1cb0377f05faf31' is expanded, showing various attributes such as Instance ID, Public IPv4 address, Private IPv4 addresses, Instance state, Public IPv4 DNS, Private IP DNS name, Instance type, and VPC ID.

**Instances (1/1) Info**

# CREATING GIT REPOSITORY :

The screenshot shows a GitHub repository page for 'umasasank/batch10\_Capstone-project'. The repository is public and has 1 branch (master) and 0 tags. The commit history shows a single commit by umasasank from 20 hours ago. The file list includes backend, frontend, .gitignore, README.md, db\_schema.png, docker-compose.yml, eshop.sql, and fileupload.csv. The README.md file is selected, showing the title 'Online Shop Application' and a description: 'A full-stack Online Shop web application using Spring Boot 2 and Angular 7. This is a Single Page Application with client-side rendering. It includes backend and frontend two separate projects on different branches. The frontend client makes API calls to the backend server when it is running.' The features listed are REST API and Docker.

README.md

## Online Shop Application

A full-stack Online Shop web application using Spring Boot 2 and Angular 7.

This is a Single Page Application with client-side rendering. It includes backend and frontend two separate projects on different branches. The frontend client makes API calls to the backend server when it is running.

### Features

- REST API
- Docker
